01 Quick Start

02 Real-time Detection

03 History and Track Replay

04 Countermeasure Operations

05 System Settings

06 Troubleshooting

01 QUICK START

1. Sign in with an authorized operator account.
2. Confirm all detection modules are online.
3. Open Real-time Detection from the navigation.
4. Select a target to inspect flight information.
5. Follow site procedures before starting countermeasures.

System indicators use cyan for normal, amber for warning, and red for high-risk targets.

02 DETECTION AND HISTORY

The detection map shows active targets and coverage range.

Use the layer control to switch map providers.

History provides event search, filtering and track replay.

Drone and pilot tracks can be displayed independently.

Date and time filters apply to events and statistics.

03 SYSTEM SETTINGS

General: theme, language and startup preferences.

Display: brightness, map markers and coordinate format.

Network: wired, wireless and remote service settings.

Alerts: risk notifications and quiet hours.

Applications: maps, files and API protocols.

About: version, firmware and factory reset.

Contact an authorized technician before maintenance.
